What was your favourite part?

42 responses

The demos, but awwwwllll the knowledge sharing

Beads & G-Stack by Scott

the part where people showing there demo/setup and all

Learning everything AI

Learning what folks are doing

I particularly liked the concrete use case of a Drupal core ticket and how AI reduced the time/increased the dependability of unwinding all that CSS.

Demos were helpful to understand the tasks being implemented! Really great!

Seeing how others use AI in their development workflow

Drupal Visual Regression Testing by Mike Herchel

Discussions around tooling

great demos - useful dicussion

Demos and link shares

All of it :D

I liked the "news" section and the demos and discussion

This was great! It was so fun to see so many of the Drupal core developers sharing their tools and strategies

Scott's demo of the issue support browser plugin was super helpful

The fact that it was casual just talking.

I enjoyed the demos by Jurgen, Mike, and Scott, but also the discussions.

Mike's demo, highly relatable.

I liked the news section at the beginning, but overall, the energy and activity in the room was amazing.

Learning all of the different skills/plugins/tools that can be used with AI

Learning about all the AI tools that are out there, accelerating development at all skill levels

sharing

Show-and-tell

sharing the skills

All the demos and all the show-and-tell

Sharing of methods

Seeing core developer and how he's using AI

The collegial and curious nature of the conversation!

?

Demos and where they led

live demos

Mike's sharing of how he used AI strategically to speed up tasks that would have been tedious and time-consuming before

The interactivity.

Scott and Mike's chats were obviously fantastic, but the whole event was great. Thanks!

Learning about beads

Just seeing what else AI is capable of that's not "taking our jobs"

Tips about Claude metadata that should be committed to the project repo

The growth mindset and collaborative nature of the group.

AI context, and plan mode

gstack

last part - vibe coding away

Hard to say, so many

What could've been better?

42 responses

The session promised people sharing their local setup, not sure how much we stayed on that topic

More demos

look more demos or talk about there exp.

Nothing, same format.

not sure yet, drinking from a fire hose

I wish I had more background to fully take advantage of these great ideas.

Links were hard to keep up with, in context! Maybe a transcript with links in context? Unsure but this was great.

More diverse demos maybe?

Not much, this was pretty fun and useful.

Focused topic. For example, the topic of the week is (Coding Tools|AGENTS.md|Skills|Plans).

... it was perfect for a lick-off.

Pre-sign up for demoes so people can come more prepared

Not sure ;)

I am a beginner with AI coding, so this was kind of over my head. But, I still thought it was fantastic.

It was great!

If I had something to add. Looking forward to playing a little more.

I think this was run really well -- it reminded me of the AI BOF at DrupalCon Chicago, where a lot of folks shared good information and opinions.

Presenters should be take some time to provide context, framing, define tool names, why they use Open Code for example.

Nothing really, assuming that capturing all the information is possible and can be shared.

Felt lost in some of the discussions, there was a lot and a bit overwhelming. But this is also as someone with minimal experience with AI and don't know all the lingos yet!

I'd like to learn more about how AI will be integrated for site builders (e.g. context control centre, canvas, eca) versus development.

this was good

I'm way behind ... so more focused how-tos would be good. May not be a perfect match for this call, but would be helpful.

Nothing I can think of ATM

Getting started can be helpful as some new need to understand the diff between when to write a skills or agents. It's essential to clarify what these terms mean and why they are necessary in the first place.

Beginners session...

Damien kept unmuting lol.

I was a little lost on some of the discussion since I am not as experienced with these tools, so having intentional sessions for different experience levels could be really helpful.

I wish I'd known about it earlier

Nothing.

more demos

The AI companion notes don't cover the full session. And a different meeting note template might be good.

Can't think of anything

No notes!

More details of what what the topics would be about before we started

maybe a schedule of speakers? I know this was off the cuff and i like but ya

This was great for a first iteration

Nothing comes to mind.

More discussion on plan mode

not sure

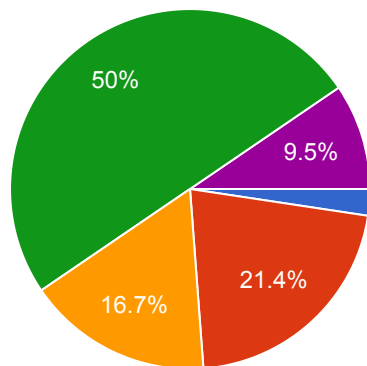

I should have joined earlier.

If I could have made it in person, rather than watch it after the fact (client work).

Where are you in your AI journey?

 Copy

42 responses

-  Haven't tried anything yet
-  Tried a bit
-  Using occasionally
-  Using regularly / daily
-  Orchestrating agents to use AI for me

Ideas for future topics?

31 responses

Using AI beyond coding

Using AI for security

Just more AI topics

Drupal AI modules - content creation

I posted in the chat, but I would really love a session focused on experienced Drupal devs who are AI beginners.

Love the beginner session (to help me feel like I have started and am doing some of the right things).

Beginner AI usages

How to manage context. I find creating a large plan with phases to complete is very helpful to reset the context window after each phase. (Helps keep Claude in the "smart zone")

Good and bad prompts

AI Fails

I like the failed AI stories and the very focused "for beginners" (getting started)... but I'm also just cool with this format where you have ~3 people demo some things... it's very interesting

I love the beginner track idea. I use AI on the regular, but what the people on this call were doing is lightyears ahead of what I do.

I have a goal to try to use a free Llama version with AI Image Alt text

I'd like to get a better idea of creating agents and agentic coding. I'd like to know how skills are best created and whether they're directly assigned to specific agents.

+1 to the Beginners session that Andrew Morton mentioned

I'd be interested to see Robert Douglas show us Spec Kitty

+1 beginner sessions

More focused set-up for beginners. What are skills, how do they work, how do you manage them in your repo?

writing well defined prompts

Doing meaningful contributions with help of Assistant AI not vibing

Sharing Drupal AI stack, tools for creating and managing Drupal site dev that is not so core / high end Drupal focused.

I think a Google Form where people can share their Drupal development stack, including AI tools, would be really helpful to know. Maybe in some standard form.

I love the beginner-focused idea that was suggested today.

explain how people use in daily work

Planning. Skills vs Agents

Love the idea of sessions for beginners. This session was great, but still dominated by well-known, long-established Drupal devs. It's great to hear from the experts, but would love to hear some new voices.

Getting started from zero.

Using AI to translate UI mockups to modular components

Grappling with the sprawl of all the various approaches and the benefits of that and the drawbacks.

Mateu's Dalia Drupal RAG thingy

Anything

I like the beginning for coding on projects / Token and cost management is important

Anything else on your mind?

22 responses

I really enjoyed this session, thanks for making this happen!

Chat was great to have people drop links when speakers were talking about repos etc, to help with context and learn. I love the idea of a "chat buddy" but the others on the call were great to drop articles and things for folks like me that are just learning about Beads and other topics like Skills wrapped in Skills... sheesh a lot to keep up with! Thanks so much for this session.

This was awesome, thanks!

What tools should be in the Drupal AI best practice?

Thanks!

Thanks!!!!

Thank you for organizing this. I'm very glad my coworker suggested it. It was really informative. I definitely would like to see more of this in the future. :-)

Spring!

Thanks, Angie, for setting this up! I wasn't sure what it was going to be when it came up on my calendar this week. Thanks to Jurgen, Scott, and Mike for sharing the work they've done, and thanks to Kristen for her work on the AI Initiative.

So good to see you again, webchick!

Thank you for making this possible, this is what we need. Hopefully like weekly?

Loved this, looking forward to the next one.

great job

3 folks from my org (CivicActions) attended and we were all absolutely blown away.

Thank you so much for putting this together

Thank You for starting this :-)

I do like the idea of having Drupal AI Beginner sessions.

Success and failure story shares.

Thank you very much for doing this!

You rock!

Thanks for putting it together

It was great to hear how people are using AI in actual practice, and not just for vibe coding. How they use it in strategic ways to increase productivity. Need a better way to collect links and meeting notes from each session. The Zoom AI companion seemed to stop taking notes too early (I usually have better luck with it).

Using AI to enhance Drupal documentation by adding a knowledge base bot within the admin interface to assist content publishers with day-to-day tasks.

When's the next one!
